

re class e airspace docket id 03 16614 03-aea-17 14 cfr 71 published dec 17 2003
fr doc 03 31025 - public comment on airspace over ny and nj FAA attempts
continually to put one over on the public who has to live underneath all of this
aviation that they take tax dollars to keep enlarging. Meanwhile, FAA does
absolutely nothing to mitigate the adverse effects of all of this flying -
letting dangerous levels of noise, danger and pollution occur. The last FAA
hearing we had regarding changes they planned for the NJ area involved them
setting up pictures so we could write our responses, even though we had left our
homes to come out to publicly comment on how fed up we all were with FAA
policies. FAA is a captive of the aviation industry and is presently doing
nothing regarding its responsibility to the rest of the population, which far
outnumbers pilots and those greedy profiteers in the aviation industry, who are
killing us with noise, danger and pollution from their mode of transportation.
This is a complaint about FAA which has issued this rule, again without any
consultation with the public who has to live with the results of their
encouragement of flying. I think that this proposal, as are all proposals that
emanate from FAA disastrous to the public who lives underneath these planes. We
need FAA to start considering protection of us, and we are in the majority of
the american public. FAA needs to be re-oriented as to their duty and
responsibility of protecting those who live underneath aircraft routes. We have
drunken, drugged pilots flying planes above our heads day and night, with the
planes spewing out toxic pollutants which FAA has made no effort to control ever
and issuing noise that is dangerous to health and safety. FAA needs to reorient
itself to the general public. Until they do, I know that all regulations they
issue are for the aviation industry benefit and certainly not for the benefit of
the vast american public.
